# Towards a better observation and therefore understanding of the transient deformations related to earthquakes

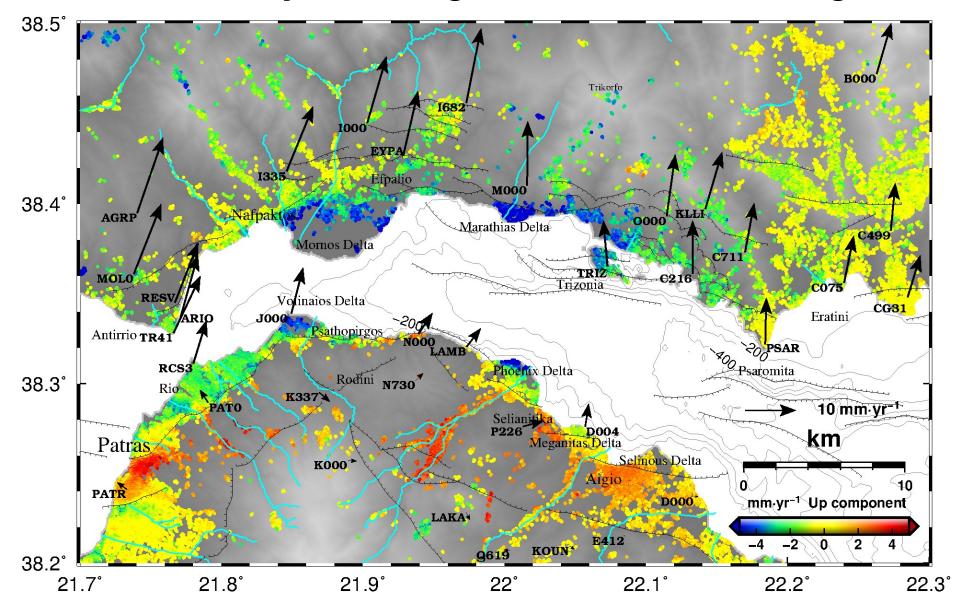

### Simon in the rift of Corinth in september 2019

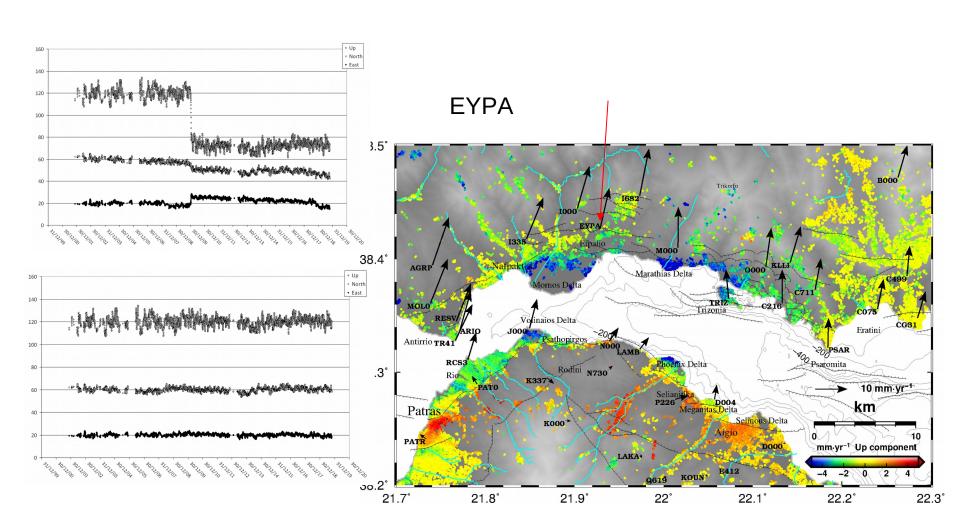

### Zoé near Kleitoria 8 May 2023

#### One of the major findings in the PhD of Panagiotis

## Example of offset at a GNSS station induced by a sequence of earthquakes

# Example of post-seismic deformation observed at the GNSS station AMAL following the Zakynthos 2018 earthquake
